President's Message

The South Devon breed was established in England as a breed by the year 1800. They had a red coat, were powerfully built and supplied rich milk and well-marbled, tender beef. The South Devon Herd Book Society was founded in 1891 and the South Devon breed became one of 14 breeds of cattle whose herd books dated back to the second half of the 19th century.

During the early years of the 20th century the breed was considered a triple purpose breed for their production of beef, milk and butterfat. The first South Devons were brought to the United States in 1969 and in 1974. Exports increased to an all-time high in the 1970's with 170 bulls being exported to Canada, 90 bulls to South Africa and 150 bulls came to the US. For the most part, the importation of South Devon cattle to the U.S. was in the later stages of overall imports of beef cattle breeds from Europe and England.

Back in 1969, America's cow herd was lacking the information and performance available today. The first South Devon cattle imported into the U.S. were loaded with all the good South Devon traits that earned them the name the "Gentle Giants". Many of the other breeds imported lacked docility and reproductive function.

Today's South Devon cattle have been modified to focus on main stream cattle industry standards, while retaining all the traits they are well-known for, docility, maternal, milk and butterfat, efficiency and tenderness. Recently at the long-range planning session held in Denver during the national events, we looked at our past and what the future holds for the breed. Lisa Bard, from Blue Print Marketing talked about marketing, Dr. Bob Hough, focused on "Who is our customer and where do we want to be" and George Gersema lead a SWOT analysis. Special thanks to these

Dar Giess, NASDA President

individuals for taking the time to be a part of the session.

South Devon breeders have spent the past 48 years making a better South Devon, one that can marble, have above average ribeye on a carcass that brings a premium without discounts. With today's information, we find the South Devon cattle to be tender, with a lower feed intake and still gain above industry average. Because of the data, we do believe that South Devon are an optimum cross for Angus, Red Angus and for cattlemen who wish to keep their cow herds totally English.

A few weeks ago, I looked through several old photos of past champions and older pasture pictures. The changes in our cattle are remarkable. Today, we give commercial cowherds the opportunity to have efficient, moderate-framed, fertile females that carry the docility and performance that cattlemen across the country demand. South Devon are finding their way into many large commercial cow herds across North America with proven results.

In closing, I would like to encourage everyone to provide information to other seedstock and commercial operations about the benefits of South Devon and Poundmaker genetics. Thank you to everyone who participated in the long-range planning session. Another session will be held at the Junior National in Manhattan, Kansas. Special thanks to all of the breeders and individuals who supported the 2017 National Show and congratulations to all of the junior and open show winners.

THD © Generations of Performance Quality ~ Angus ~ Red Angus ~ South Devon

South Devon

The Best Kept Secret in the Beef Industry

By Dr. Bob Hough

South Devon is an up and coming breed, which due to its unique genetic strengths, is finding a home in some of the most progressive commercial cattle producers crossbreeding systems. They are also popular with some of the largest and most respected seedstock producers for the development of hybrid and composite seedstock. This move to South Devon genetics by these leading operations is well founded, as they are a British breed that brings all the maternal traits and carcass quality you expect from a British breed, plus the muscling and cutability more common to Continental breeds. They also have an excellent reputation for feed efficiency, tenderness, and docility making them an ideal alternative to cross with Angus based cows.

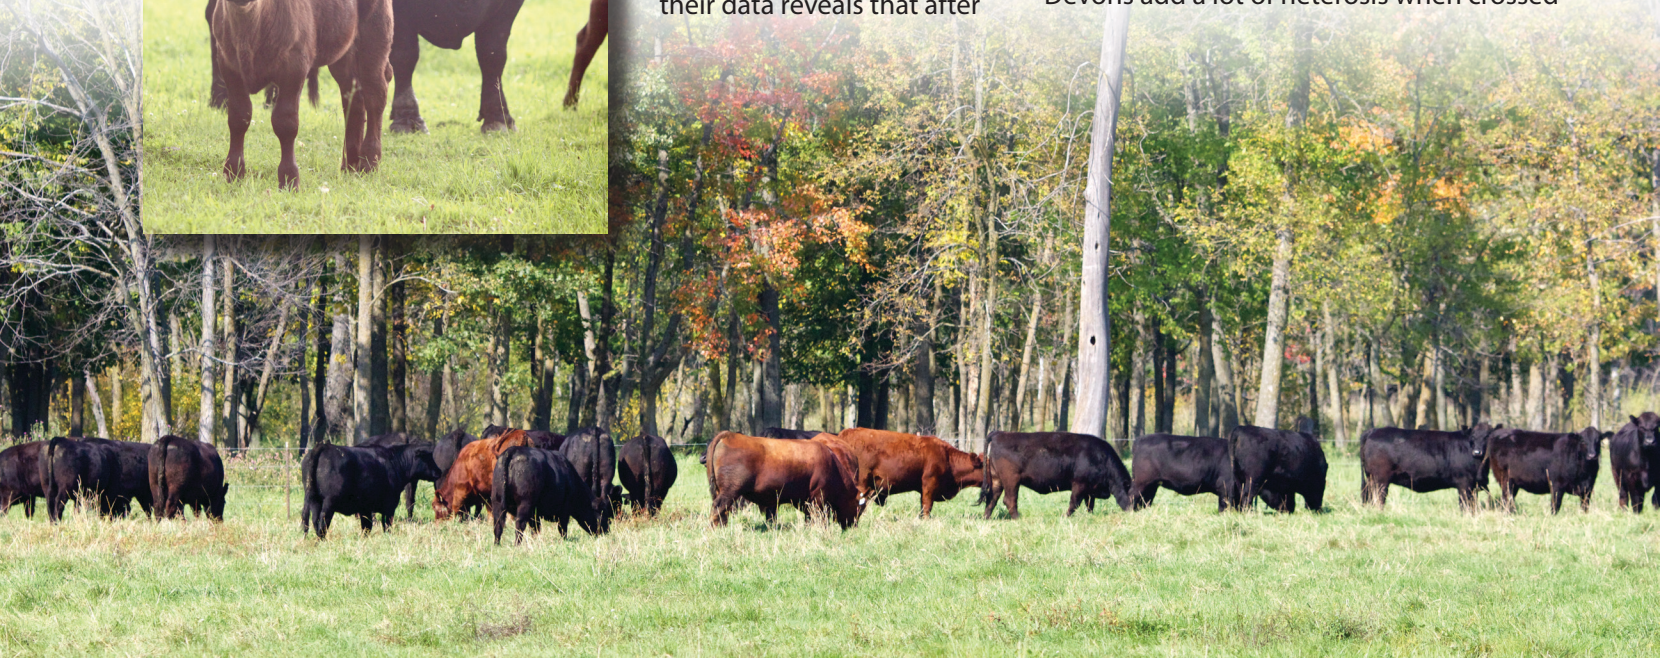

Leo McDonnell, Jr. whose family has run Midland Bull Test in Montana since 1963 is very familiar with what South Devon offers the industry. According to McDonnell, "I think they are the preferred breed for crossing with Angus. South Devons have proven feed efficiency, and they have been the top breed in a lot of tenderness studies. They also have good feet, udders and calm dispositions, but it is when it comes to feeding cattle that they really distinguish themselves. With South Devon you get the marbling associated with a British breed with an extra square inch of ribeye." The USDA Meat Animal Research Center (MARC) acrossbreed EPDs bare this observation out. When looking for a breed to cross with Angus, their data reveals that after

With South Devon you get the marbling associated with a British breed with an extra square inch of ribeye.

Leo McDonnell, Jr.

Angus, the average South Devon has more marbling than any other breed and more ribeye area than any other British breed alternative in the MARC acrossbreed database.

Dave Nichols of Nichols Farms in Iowa has been raising South Devons for 15 years and confirms these observations: "We find that from a carcass standpoint, our purebred South Devons are high quality when it comes to marbling and similar to our Simmental/Angus F1 hybrids when it comes to cutability. They are also very comparable to our SimAngus from a milk standpoint, and our South Devons are very docile. We especially like how they winter and then slick out in the summer and work on our fescue pastures. We are excited to have added to our South Devon herd bull battery the top bull for feed efficiency over all breeds from the Midland Bull Test as well as the seventh overall bull, and what these genetics can add to our program from a feed efficiency standpoint. South Devons add a lot of heterosis when crossed

with Angus, and we are using them extensively to make hybrids and composites. We find that once people try them, they love them and come back for more."

Lee Leachman of Leachman Cattle of Colorado is another firm believer in the South Devon breed: "Our family has been in the South Devon business since the mid-1980's. Our data shows that they are a highly feed efficient breed that is close to Angus from a marbling standpoint with more cutability than any of the other British breeds. When we add them to our composites, they sort out as some of our very top cattle on our \$Profit index, and their genetics will play a big role in our Stabilizer composite in the coming years. Many people whose only opinion of the breed is from back when South Devons first came on the scene in the 1980's need to take a second look. They have been moderated in frame, made polled, and are much more similar to Angus from a phenotypic standpoint, which results in uniform calf crops when crossed with Angus."

Although a new breed to many people, South Devons have been established in the U.S. for over 45 years, and they should not be confused with the Devon breed. South Devons have a completely different heritage than Devons. South Devons were developed in England as a unique breed dating back to as early as the 16th century, and they are larger framed, slicker haired and higher maternal cattle than the Devon breed. The first South Devons were imported into the U.S. in 1969, and the North American South Devon Association was founded in 1972.

The South Devon Association also has one of the strictest performance reporting requirements in the industry with mandatory Total Herd Reporting (THR). Their THR program requires the production of every cow be accounted for annually, and the birth weight, weaning weight and yearling weight of every calf reported for the dam to remain active in the registry. This means the South Devon Association is able to calculate some of the most precise and reliable genetic predictions in the industry. Their EPDs are calculated by BREEDPLAN in Australia and include a full suite of predictions for all the growth and carcass traits.

According to Dar Giess, president of the North American South Devon Association: "We are seeing some of the largest operations in the country incorporating South Devon genetics into their crossbreeding systems and composite programs. Our THR data requirements gives

our customers some of the best EPDs in the industry, and we are planning to expand the genetic predictions we offer the industry. The Association has aggressively been collecting feed efficiency data with the goal of developing a genetic prediction. We also plan to come out with indexes this year that will both simplify selection and be a more powerful tool to move our customers' herds forward genetically than by using individual EPDs."

South Devon is certainly a breed that people are taking notice of, and they are creating a lot excitement amongst progressive cattle producers. As Dave Nichols observes, "Our industry is in desperate need of another British breed to cross with Angus, and I think South Devon can fill this need." South Devon provide a distinctive combination of traits to the industry, which includes all the maternal and carcass quality associated with British breeds plus the cutability similar to what the Continental breeds have to offer. When combined with their reputation for docility, feed efficiency and the production of tender beef, they make an ideal option to cross with Angus based cows. To get more information on South Devon go to their website at www.southdevon.com or contact the head of the South Devon Registry – Sherry Doubet, 19590 E. Main Street, Suite 104, Parker, CO 80138, Phone: (303) 770-3130.

Dr. Bob Hough is well-known throughout the country for his service to the Red Angus Association of America and the North American Limousin Foundation. Raised in Centre County, Pennsylvania, he received his undergraduate from Penn State, his M.S. from the University of Connecticut and his Ph. D from Virginia Tech, all in animal science. He is a popular speaker and prolific writer and makes his home near Denver, Colorado.

Bar/E Cattle Co.

Clinton, North Carolina

2017 Seedstock Producer of the Year

Steve & Barbara Elmore, Bar/E Cattle Company, Clinton, NC

Bar/E Cattle Company, located 60 miles southeast of Raleigh, North Carolina in the eastern coastal plain in Sampson county is owned by Steve and Barbara Elmore.

Prior to being a cow/calf operation, stocker calves were purchased off farms or sale barns to background on rye fields from October to April. Calves were sold in truck-load lots so fields could be planted with grain or produce crops in spring and summer.

One hundred South Devon cows and sixty

Angus-based commercial cows currently make their home on the coastal Bermuda hay ground and pastures. Cows calve in the fall from September-December.

"Our first South Devon cows were purchased in 2006 from Triple M Farm, Clinton, North Carolina," said Elmore. "These cows were Brandy Creek genetics bred by the MJB North Star bull." All heifers were retained from these cows. Subsequent purchases of females came in 2009, when bred heifers and cows were purchased from the DLCC Ranch, Pierz, Minnesota and in 2010 bred cows were purchased in the MJB Ranch sale in Montana. "The better heifers from our cows are retained for sale or replacements," he said. "All heifers and steers not retained or sold privately, are sold in truck-load lots with the Coastal Carolina Cattle Alliance, marketed by Southeast Livestock Exchange Video Sale."

Bar/E cows graze the coastal Bermuda hay fields.

"The calves are weaned in April, fed a daily ration of 14-16% pelleted feed and free choice hay. They are backgrounded for a minimum of 60 days and then sold," said Elmore.

Herd bulls purchased from 2006-2010 included Nichols Farms, DLCC Ranch and MJB Ranch genetics.

The grazing program is coastal Bermuda hay, irrigated and fertilized with hog waste in summer months. Excess hay not grazed is baled in 4 x 5 bales. Coastal hay and protein tubs are supplemented in winter months, with high magnesium mineral year-round. All pastures are over-seeded with Abruzzie rye or oats for winter grazing.

Steve currently serves as the NASDA Vice President. He has been on the NASDA Board of Directors for six years and is a founding member of the Southeast Regional South Devon Association. The Bar/E Cattle Company donated the 2017 NASDA Youth Experience Heifer, Bar E Teddy, awarded to Nicole Kibler, Edinburg, Virginia.

Steve Elmore, Mary & Jim Brown, Lodge Grass, MT

Bar/E calves are born from Sept.-Dec., backgrounded for 60 days and sold in June.

C/N Ranch

Ryegate, Montana

2017 Commercial Producer of the Year

Carroll, Carole and Ari Nelson

The C/N Ranch is a commercial cow/calf operation located 80 miles northwest of Billings in south central Montana. The ranch runs 200 head of Red Angus and Red Angus cross mother cows. Since its beginnings, the emphasis has been on maternal traits in bull selection and bulls have been selected off the top end of some of the best Red Angus purebred bull sales each year. The success of these selections is attested by the fact that for the past several years, all heifer calves, not kept in the herd, have been sold as replacement heifers; none have gone to feedlots. The steers typically wean between 625 and 650 pounds and have performed very well in commercial feedlots, with almost all grading Choice and Prime at slaughter. This

A C/N cow calf pair in mid-summer of 2016 in typical pasture conditions.

South Devon-sired first calf heifer ("Poundmaker") with excellent udder quality at the C/N Ranch.

performance occurs under frequently harsh weather conditions and has been obtained in spite of the fact that the ranch is located in short-grass, low moisture (12 inches per year) country. Feed consists of grass and hay without any supplements except protein at certain times of the year.

Carroll and Carole Nelson, the owners, have always been advocates of cross-breeding and for many years have searched for a breed that would provide a complimentary cross with the Red Angus. What was desired was an "English Outcross," i.e. a breed that would complement and strengthen the maternal characteristics of the Red Angus while adding feedlot characteristics typically associated with the Continental breeds. Maintaining docility was deemed especially important, as the Nelsons work their cattle from the ground and must be able to walk through them as needed. Also important is the ability to get out and rustle for a living, i.e., to maintain body condition, feet and legs, all while raising a good calf. South Devons were identified as being highly fertile, able to adapt to harsh climate conditions, and adding marbling, muscling, feed conversion and carcass merit. As the Nelsons searched for South Devon bulls, the problem of high birth weights in the breed was apparent. Calving ease and vigor at birth is of prime importance at the C/N ranch, as the Nelsons don't have the desire or the time to baby sit their cows during calving season and do not expect to assist any births except abnormal presentations.

South Devon breeders have improved birth weights, to the point that, in 2013, the C/N ranch purchased its first South Devon purebred bull from the DLCC Ranch in Minnesota. The calves from that bull were delivered

easily and have grown very well, ranking at or near the top for weaning weights. The highest compliment that the Nelsons make is that you can't tell the difference between the Red Angus-sired from the South Devon-sired calves; the phenotype is equally good, and as stated, the growth is equally good or better, and all the advantages of heterosis are obtained. The first daughters from that bull calved in 2016, calved without assistance, have good udders and raised a good calf. Based on that success, another bull was bought in 2015, and the calves from this bull are equally good.

Another advantage of the South Devons is that the South Devon association has provided the opportunity to register and sell Poundmakers, i.e. cattle that are at least 50% South Devon. Four Poundmaker bull calves were retained at weaning this year and are being fed at the DLCC ranch in preparation for their April Production sale. Even under exceptionally dry conditions and little to no pasture regrowth, the four bulls still averaged over 750 pounds adjusted 205-day weaning weight and should become outstanding sires in any commercial breeding program.

Keeping in mind the Nelsons pay no attention to "show ring" attributes when selecting breeding prospects, it is perhaps still worth mentioning their C/N 2016 Poundmaker heifer calf. She was produced under the same tough conditions on the ranch, but demonstrated the outstanding disposition and conformation that resulted in her being selected Reserve Grand Champion Poundmaker Female at the recent 2017 National Western Stock Show in Denver.

The Nelsons are pleased that they have been able to find a truly complementary cross-breeding program through the use of South Devon bulls, and intend to continue a rotational cross with the South Devons and Red Angus as a permanent feature of their breeding program.

Typical pasture conditions in early spring of 2016.

Social Media Step-Up

By Kate Hagans

Social media is an inexpensive way to promote your operation and keep new and existing customers chatting about your business. During this time of volatile markets in the agricultural industry, producers are looking to get the most bang for their buck. Social Media outlets can provide a great service, but only if performed and operated right.

The top media outlet for business growth is no surprise, Facebook. This media platform offers the most versatile options for users. Such as sharing content from others, providing thought-provoking discussion, numerous photos and even Live Videos.

Even better is Facebook doesn't get the entire spotlight. Instagram is a second weapon in reaching a variable and massive audience. Instagram does it best by focusing on providing users with a visual experience, and by limiting the focus on words.

Knowing this, the first step is to select the social media outlets your operations wants to have a professional image on. You don't have to select just one, but keep in mind the more media handles you have, the more time will be needed to manage those on a professional level.

GROWING YOUR COMMUNITY

FACEBOOK

Use Live Video

Live Videos get the most reach by far compared to any other content formats. There are many ways a livestock producer can use Facebook's Live Video. Examples include, during a livestock show, sorting through cattle in a pasture, or even Facebook Live your annual production sale.

You're only limited by your own creativity. Keep in mind before posting, ask yourself the question, would this represent my business in a professional way?

Invite users to Like your page

Online and active users are sitting ducks. If someone you know hasn't found or liked your page as they've

seen material in their personal news feed, send them an invite.

Use Media

One of the worst things you can do is post something on your page that will not grab your audience's attention. By attaching a photo, video or link to your post you are making sure your audience has a visual tie-in to your message.

INSTAGRAM

The main content material for Instagram is of course, photos. Don't think you have any business professional worthy photos? Then get the most bang for your buck by using the photos you hired a professional livestock photographer to take of your cattle and operation.

Strategically Interacting

To gain exposure and followers, organically (without paid promotion) interact with other accounts who relate to the livestock industry. This is where the amount of time and dedication comes in. First, get organized with online planning.

Choose five brand accounts that are similar to yours and leave one genuine comment on their three most recent posted photos. By commenting, you will expose your account to people who are interacting with material that's related to yours.

OVERALL

Once again, social media is meant for businesses to connect with their audience without sinking your

operations entire promotional budget. It takes time and dedication just like the time you have invested in your herd of livestock.

Make smart decisions when posting content. Simple proof reading goes a long way and incorporating a link in a post to show your business is stating credible information.

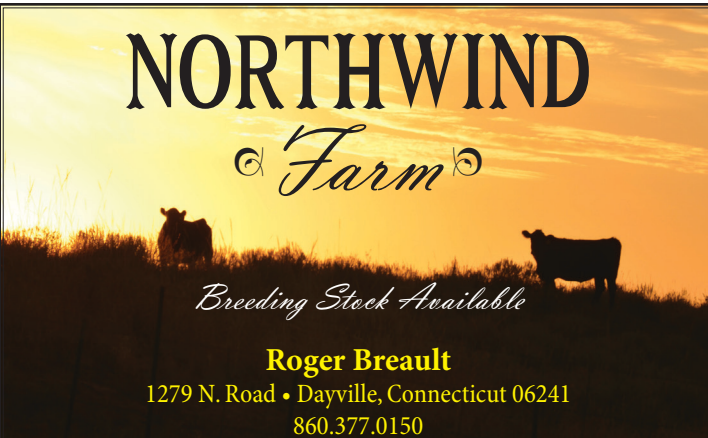

It's also important to stay consistent in your daily postings. This can refer back to asking yourself is this professional enough to post on my account? Social media can be extremely challenging and requires critical strategy to be done correctly. However, this only scratches the surface of the capabilities of social media. Some companies pour thousands of dollars into better understanding and maximizing results from social media.

The online community will only continue to grow, which opens up opportunities for agricultural organizations to protect the perception of farmers and ranchers and also grow operations by reaching a new and younger audience.

However, if your focus is on running your operation rather than highlighting it online, you are not alone. There are many young and professional communication experts that can certainly help in a social media campaign.

Remember, by making the choice to have an active presence in social media, carefully consider the time and dedication it will require to maintain a professional voice and if it is something your organization can profit from.

Kate Hagans is an Agricultural Communications graduate of Kansas State University. She had her start in feeder cattle and backgrounding as a member of -H Ranch in Utica, Kansas. She is a membership coordinator at Kansas Farm Bureau and a freelancer who writes about agriculture and ranch topics.

NICHOLS SUPERIOR GENETICS

Our business in life is not to get ahead of others, but to get ahead of ourselves — to break our own records, to outstrip our yesterdays with our tomorrows.

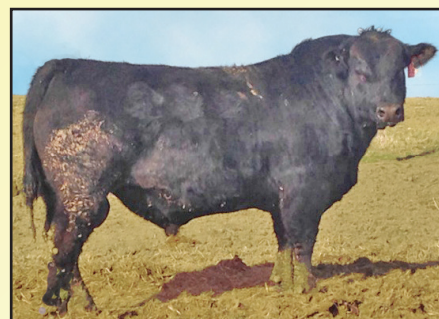

BC Progress 315 U is a full blood South Devon bull that lives up to his name.

His Trait Leader EPDs, attractive phenotype, gentle disposition, feed efficiency and earning power represents multi-trait progress. He can compete with any breed. Owned by Nichols Farms and Big Country Genetics.

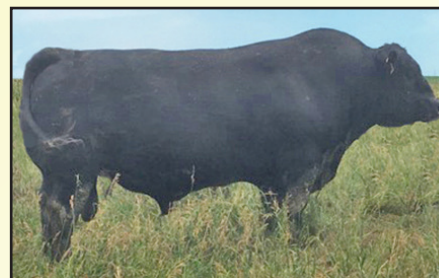

production				carcass				
BW	WW	MM	YRL	MARB	REA	FAT	CAR WT.	YIELD%
+3	+62	+29	+131	+0.5	+0.40	-0.02	+53	+1.4

MJB Black Jack 424B is double bred through his dam and grand dam for feed efficiency. He proved it by ranking 5th over about 1,000 bulls at the Midland Bull Test. In addition to his faultless phenotype, He's a calving ease sire.

production				carcass

South Devon

Planning for the Future

By Lane Giess

When your family has made the raising and selling of cattle their entire life, it seems natural that talking about cattle is often discussed at the dinner table, on long road trips, or during phone calls. Over the course of the year I make many phone calls back home to check in, ensure the cattle are healthy and most importantly, to find out what's the next step we need to take to grow and build our operation. It was one of those random phone calls, where I spoke with my dad about the state of the South Devon breed.

I wanted to know why the breed hasn't experienced much growth over so many years and why few commercial cattle producers realize what the breed has to offer. I had told my dad I recently came out of a presentation where even the Angus breed had expressed concern about their future and how the beef industry might change to choke out breed associations. As many know, we have witnessed this in the swine and poultry industries.

It was during that phone call when I asked what the South Devon breed has for goals. Every organization wants to be successful, promote what they have to offer and serve their members. To do that, there needs to be realistic and concrete goals and even better, ways to achieve those goals.

The South Devon breed needs goals if the association wants to see growth. A map should be drawn out of how to achieve those goals. That's why there was a long-term strategic planning meeting hosted at the 2017 National Western Stock Show.

LONG-TERM STRATEGIC PLANNING

Board members, members, cattle producers and industry professionals alike were invited to come sit in on the first meeting of its kind for the breed. There, we wanted to hash out issues the breed is facing as an association. Topics considered were:

- Breed Identity
- Membership
- Strengths
- Weaknesses
- Opportunities
- Threats
- Performance Programs
- Marketing
- Promotion
- Research
- Junior Growth

And most importantly, how can we better serve the members of the breed. Because, and it was said in the meeting, "a rising tide lifts all boats."

The meeting focused mainly on the current state of the breed.

Lisa Bard of Blue Print Marketing asked those in attendance, "who are you and what do you stand for? And what do we want to be and say?" These questions are vital to develop an effective marketing plan, especially in an industry becoming increasingly saturated with powerful marketing. Breed identity needs to remain consistent and accurately depict who we are and what we offer.

With a unified identity, we can mold and shape an effective promotional campaign that will spread the awareness of the breed, bringing interest from prospective customers. Bard also addressed the need for high quality and effective social media and promotional content. As a small breed, creativity and inexpensive marketing to reach our customer remains a high priority.

Dr. Bob Hough, Western Livestock Journal contributor, honed in on understanding who our customer is, and how best to dedicate resources to those producers willing and able to buy our product.

Hough also expressed the need to find an identity that will remain consistent across all platforms and conversations with producers. Are we the disposition breed? Are we the feed efficiency breed? Perhaps we are the outcross breed? Hough suggested to narrow the focus and convey what the breed does the absolute best.

This does not need to be a single trait, but rather could be a package of traits that are unlike anything else offered in the industry. One that will attract customers and high-

The South Devon breed is known to be maternal, growthy, and feed efficient.

profiled attention to the breed. With increased attention, comes the need to back-up claims. Hough suggested by increasing attention spent on research and performance programs to showcase the South Devon breed will do what the members say they do.

George Gersema, a fellow South Devon producer and businessman, moderated a SWOT analysis to culminate the planning meeting. Members present were asked the question "what is the South Devon breed strengths, weaknesses, opportunities, and threats?"

Members responded with much enthusiasm at this activity. Strengths highlighted were; Docility, Feed Efficiency, Versatile Color, Continental Growth, Marbling ability and No Genetic Defects. Weaknesses highlighted were; Birth Weight, Calving Ease, Conformation, Critical Mass-Small Association, and Unfamiliarity with the Breed.

OPPORTUNITIES TO CONSIDER

By understanding strengths and weaknesses, a discussion can be made for potential opportunities. Perhaps the biggest opportunity the breed has is the ability to become known in the industry, perhaps there is a place for the genetics in the feed yards, or in the dairy industry. Forward-thinking producers are always on the hunt for something new, something better. Does the South Devon breed fit that need?

Or is it feasible given technological advancement, the breed can utilize new information given through genomics.

Perhaps breeders find a way for their genetics to be featured through commercial bull studs or capitalize on niche markets.

RECOGNIZING THREATS

But breeders also must consider threats facing the breed.

Does the South Devon name carry enough weight to be featured in the sale barn? Are there larger and more aggressive breeds out there trying to capitalize

on opportunities we could find some success? Are previous prejudices about the breed going to hinder growth into the future?

And quite honestly, does the breed face the risk of dying out?

WORKING FROM THE PAST TO THE FUTURE

Some final thoughts were given on where the breed is at.

The South Devon breed is known to be maternal, growthy, and feed efficient. So are South Devon cattle the "British breed with all the advantages of Continental?"

Although much was accomplished at the January meeting, there is still work to be done. The process is a necessity for a rapidly changing beef industry.

The meeting served to foster a needed discussion about where the breed is at, but where does the breed want to go from here?

Breeders and members must consider this question and relate to how they can better serve the breed.

The planning meeting will continue on July 1st in conjunction with the National Junior Show held in Manhattan, KS. A complete list of the minutes from the long-term planning meeting held in Denver can be provided upon request. I also encourage you to submit any ideas to Lynn Giess at darlynn@fallsnet.com.

Lane Giess is a NASDA board member and part of the DLCC Ranch program in Pierz, MN. He is a graduate of Kansas State University with a Bachelor of Science in Animal Science and is pursuing a Master's degree in Beef Cattle Breeding and Genetics and a Ph.D in Meat Science.

NASDA Board of Directors Meeting January 8, 2017 Summary of Actions

- Voted to continue using ABRI for genetic analysis services.
- Discussed holding the National Tour in North Carolina in 2018.
- 2017 'Junior National' will be held in Manhattan, Kansas.
- Discussed the World Tour to be held April 16-May 4 in South Africa. NASDA will send over a presentation for the conference.
- Jordan Vander Molen will continue to coordinate a semen catalog for the website.
- Voted to establish a South Devon Foundation.
- Voted to request a Poundmaker Junior Show for the 2018 National Western Stock Show.
- Voted to increase Dues and Fees as follows:
7/8+ - \$16

Over 1/2 but less than 7/8 - \$14

1/2 and below - \$10

Pedigree Recording: To include pedigree of other -breed parent on Registration Certificate - \$30

Rule Reminder

Under Rule 5, Artificial Insemination and Ova Transfer, #3: A blood type record of all sires used in artificial insemination must be on file with NASDA.

Letter E for 2017

The international letter code for 2017 is E. Remember to include the letter E as a part of every calf's tattoo in 2017. For example, a NASDA preferred tattoo would be 124E.

2018 Photo Contest

The deadline for the 2018 photo contest is January 1, 2018. The photographer of the winning photo will receive a South Devon jacket, banquet ticket and recognition at the annual South Devon banquet held each year in Denver in mid-January. Send photo contest entries to Lynn Giess, darlynn@fallsnet.com.

Youth Experience Heifer Applications Due Nov. 10

The deadline for 2018 NASDA Youth Experience applications is November 10, 2017. Juniors interested in applying for the heifer can log on to www.southdevon.com.

Co-Op Promotion

Co-op promotional opportunities are available from NASDA. The NASDA will share 50% (with a maximum of \$400) of the cost of promotions for South Devon events such as promotional booth and/or displays at fairs, expos, etc. This includes consignment sales, but excludes private and production sales. Prior approval by the NASDA Promotions and Publications Committee is required.

NASDA is on Facebook

For up-to-date events and information log on to the North American South Devon Association Facebook page. If you have photos or highlights from a South Devon event, e-mail kate.hagans@gmail.com.

Congratulations Nicole Kibler

2017 North American South Devon Association Youth Experience Heifer

Nicole Kibler is the 2017 recipient of the North American South Devon Association Youth Experience Heifer donated by Bar E Cattle, Clinton, North Carolina.

Nicole is a Sophomore at Kansas State University majoring in Animal Science and Industry. She is a member of the Block and Bridle, Meat Science Association (MSA) and was recently elected as the barbecue chair. She grew up participating in FFA and 4-H, showing cattle, sheep, goats and hogs. She was an FFA Office for four years and competed in livestock judging, meats judging, crops and Ag Issues. She is also a member of the National Junior Angus Association. Future goals include being a Quality Assurance Manager and one day taking over the family farm with the help of her brother and sister. Kibler Farms located in Edinburg, Virginia is a cow/calf operation and feedlot. Nicole has been active in the farm activities, including vaccinating cattle, tagging, weighing and also mixing rations and feeding. "I want to teach others about the importance of the cattle industry and agriculture as a whole. I hope to do this by obtaining a bachelor's degree from Kansas State University. Also, I hope to implement South Devon genetics into my Angus herd to get heterosis and the benefits of both breeds. The more I learn about the South Devon breed the more excited I become about their hybrid vigor. I am particularly excited about the South

Devon's superior ability of longevity and believe the quality of my cattle will benefit greatly by introducing this breed into my own herd. I would like to build my herd of cattle and use one of the most upcoming breeds to do that. Owning a South Devon heifer will allow me to promote the breed on the east coast."

My future plans for 'Teddy' are to breed her and when she calves, I'll name her calf 'Bear'. I am excited about starting a South Devon herd of my own. I would encourage other juniors to apply in the future for the NASDA Youth Experience Heifer. I believe it is the only national breed association with this type of program and it really is unique, she said.

Nicole is the daughter of Randy and Donna Kibler.

... yields ...

For the past four years, our F1 Red Angus x South Devon-cross commercial heifers have sold at or very near the top of all sales in the U.S.!

F1 steer calves born in April and weighing 626 lbs. off the cow with no creep feed, have sold at the market top the past five years.

Charging Up Your New **Bull Battery**

By Dr. Twig Marston

Managing yearling bulls can be a challenge. Stressors such as adapting to new surroundings and the uprising of social activities bring extra burdens on their physical and mental wellbeing. Because yearling bulls have a considerable amount of growth and development ahead of them, giving them extra care and management can pay large dividends.

A common complaint about yearling bulls is that they carry too much condition and have a “major meltdown” during their first breeding season. There are several solutions that can help with this problem. First, don’t buy or feed a fat bull. Instead, develop athletes, bulls with true muscle shape and movement. Second, have bulls long enough before the breeding season that you can condition them into their working clothes. It is important that bulls are gaining some weight and consuming the same diet they will be expected to eat when turned out with females. Cattle being switched from concentrate containing diets to straight forage diets will often experience dramatic declines in feed intake and weight loss. Exercise is important when preparing for a breeding season. Bulls need to have plenty of space and be forced to walk. Body condition scores can be used on bulls just like they are used in the cowherd. Moderate body condition is ideal, too thin and too fat should be corrected.

Their diets need to be balanced for nutrients, and they need to have a good water source readily available. Research has shown that feeding zinc at 60 ppm of the diet is beneficial to male reproduction. Other mineral and trace minerals should also be considered and accounted for. VitaFerm® Concept•Aid® mineral supplements are excellent sources of minerals, trace minerals and vitamins. In addition, they include Amaferm®, which will aid in forage digestion.

Before the breeding season, every bull, regardless of age, should pass a complete breeding soundness exam. Research has shown that bulls with scores

greater than 71 have a dramatically higher conception rate than those scoring 70 or less. When compared to the cost of using a sterile or sub-standard bull, the money invested in a BSE is well spent.

A structurally sound yearling bull should not require any foot care. Occasionally, however, foot rot, toe ulcers, and abscesses develop and require immediate attention. Excessive hoof growth may call for a foot trimming. If trimming is needed, it should be done 3 to 6 weeks before the start of breeding season so the bull can recover from any soreness the trimming may have caused.

Bulls should be protected from severe cold and heat prior to turn out. Providing bedding during winter and spring storms will protect testicles from frostbite. Likewise, extreme heat can be detrimental to sperm production.

Protect bulls from diseases. Consult with your veterinarian and establish a comprehensive herd health program.

Try to observe the yearling bull closely to make certain he is getting his work done. Also, keep an eye on his condition. If he is getting too thin and rundown, he needs a break. Thin bulls are more apt to hurt themselves, become less fertile and have increased nutritional needs after the breeding season.

Yearling bulls should be pasture mated to females that are similar or smaller framed than the bulls. Turning out younger bulls on larger cows may cause injury and failure to mate properly.

Good bull management is an essential part of developing bulls to a long and productive life. Many obstacles can derail a yearling bull, however, by using careful observation, anticipating problems and applying timely applications you can increase returns from every bull on the place.

KINN FARMS

Quality, Eye Appealing, Fuctional Females.
Balanced bulls focusing on top genetics and featuring calving ease
with moderate frames and superior carcass traits without losing
sight of maternal characteristics, quality and function.

2016 SOUTH DEVON HALLMARK DAMS

The North American South Devon Association in continuing efforts to stress performance and productivity, recognizes the superior females of the breed, the Hallmark Dams. To identify these cows, emphasis was placed on early puberty, breeding, early calving and superior production over time. A Hallmark Dam is the standard by which all South Devon cows can be judged.

Hallmark Dams Criteria

1. Dams must have weaned a calf born since January 1, 2015.
2. Dams must be at least 50 percent South Devon and have had a minimum of three calves.
3. The maximum age for a dam to have had her first calf is 30 months of age.
4. A maximum calving interval of 395 days.
5. Every calf produced must have weaning records submitted.
6. A progeny average 205-day adjusted weaning weight ratio of at least 105.

The following list recognizes 137 South Devon cows bred and owned by 24 South Devon breeders. The first table lists each individual Hallmark Dam and her current owner. The next table shows the 76 sires of these distinguished dams, while the last table lists all breeders of these Hallmark Dams. Once a dam reaches this status she will continue to be recorded in the database as a Hallmark Dam.

2017 SOUTH DEVON NATIONAL CATTLE EVALUATION

ANALYSIS DESCRIPTION

Agricultural Business Research Institute • University of New England, Australia

Welcome to the 2017 South Devon Sire Summary. This brings you the most current EPDs available on sires within the breed analyzed by the Agricultural Business Research Institute. This analysis is a crossbred analysis which accounts for hybrid vigor and heterosis differences. This allows for all animals to be compared regardless of their percentage South Devon.

Summary

The North American South Devon Association in coordination with ABRI and AGBU have utilized the full crossbred analysis structure which better accounts for other breed animals being used in seed-stock producers' breeding programs to allow for the genetic component to be more accurately reflected in animals' Expected Progeny Differences. The analysis has resulted in a very good correlation to the previous analysis for the growth traits of BW, WW and YW as well as SC and Milk. The largest differences were seen in the non-parent animals as would be expected as before these animals had no progeny in contemporary groups that were contributing to the EPDs derived from the analysis and these animals now have progeny that are now included in meaningful contemporary groups. Additionally, new non-South Devon animals that previously had no data in the analysis are included in the analysis. As these animals increase the number of

progeny in meaningful contemporary groups, one can expect their EPDs to more accurately reflect their true genetic merit and their accuracy values will increase correspondingly. The 2017 analysis added two new EPDs to better identify calving assistance. The EPDs are Calving Ease Direct and Calving Ease Maternal. You will find the descriptions of these traits in the definitions sections.

Conclusion

This analysis of the South Devon breed was run using the latest version of the BREEDPLAN software. This software is a significant advance in the analytical techniques for genetic evaluation of live-stock. The inclusion of techniques for evaluating other breed genetic contributions and the effects of heterosis, result in the 2017 North American South Devon Association analysis to be considered the most accurate and complete analysis undertaken to date. The results of this analysis are not comparable to previous methods due to the changes in formulation and comparisons should not be made on an individual animal's EPDs from the previous analysis.

ACC - ACCURACY

Accuracy (ACC) is an expression of reliability of the EPD and may range from 0 to 1. As accuracy approaches 1.0, the EPD is more reliable and can be expected to change less in the future as more progeny data are accumulated. By reliability, we mean how certain we are that the EPD represents the true genetic merit it estimates.

Accuracy may be categorized into low, medium and high reliability as follows. Low: 0.0 to .40; Medium: .40 to .70; High: .70 to 1.0. Sires with desired EPD values and high accuracy can be used with confidence that they will favorably contribute to herd improvement. Sires with low accuracy can be considered good prospects but might be used on a limited basis to minimize risk. Low accuracy values represent situations where calculated EPDs rely heavily on the records of related individuals since few or no progeny records are available. These EPDs are our best estimate of the sires potential at the time; but are associated with a greater degree of uncertainty.

Accuracy	Birth (lb)	Weaning (lb)	Yearling (lb)	Milk (lb)	Scrotal (cm)	CarcWt (lb)	Rib fat (inch)	REA (inch ²)	MARB (score)

EPD - EXPECTED PROGENY DIFFERENCE

Expected Progeny Differences (EPDs) may be used to estimate how future progeny of the animal will compare to progeny of other animals within the breed. To effectively use the Sire Summary, consideration must also be given to specific goals, management and environmental conditions, present level of production, herd strengths and deficiencies, and other economically important traits such as soundness.

EPDs are reported in +/- pounds for the different growth traits and are computed from a genetic evaluation system, which combines performance information currently available on the sire, his progeny, and related individuals into one value which estimates genetic transmitting ability. The analysis of the data considers and adjusts for the level of competition within a herd, genetic trend within the breed,

and genetic merit of the mates, thus making EPDs on across-the-breed evaluation allowing comparison of sires produced and utilized in different herds in different years on an equal basis.

EPDs in the South Devon Sire Summary are breed specific and cannot be compared directly to EPDs of cattle in other breeds. The genetic reference points are not the same for different breeds and therefore a +10 lb. Weaning EPD in one breed does not have the same meaning in any other breed. The summary is designed to help identify differences within the breed; information from designed breed evaluation studies is available for making breed comparisons. There are conversion tables that allow EPDs to be compared across breeds, however the accuracy of those tables has not been verified.

CONTEMPORARY GROUP DEFINITIONS

All EPDs are based on comparisons of calves within the same contemporary group. Most inaccuracies in EPDs are associated with incorrect reporting of contemporary group information. Submitting accurate performance information on all animals is a necessity in any genetic evaluation program. An animal's performance record needs to be included with its peers to accurately contribute to its EPDs. Likewise, contemporary groups with no variation (ie, all Docility scores 1) provide no value to the analysis either.

Contemporary Groups consist of animals of the:

- I. same sex
- II. born in the same herd and season (within 60 days)
- III. managed together and treated alike
- IV. same weigh date

CRITERIA FOR LISTING IN SIRE SUMMARY

Main List of Active Sires (136 Sires)

In order to appear in the main listing, a bull must be at least 87.5 percent South Devon. The main list includes sires that have been thoroughly sampled and evaluated in the current population. Sires must have a weaning accuracy of at least .45 and have had performance progeny born since January 1, 2014.

Genetic Indicator Supplement (47 Sires)

The genetic indicator supplement includes active sires born since January 1, 2010, having a weaning accuracy of at least .35 but did not meet the minimum accuracy of .45 to make the main list. The purpose of the genetic indicator supplement is to provide preliminary data on the most heavily used young sires.

HERITABILITY ESTIMATES

Heritability is the portion of the total variation in phenotype among animals that is due to genes that are passed on to offspring. Heritabilities range from 0 to 1. The estimates used are based upon data reported to NASDA. The heritability estimates used in the National Cattle Evaluation are as follows:

Trait	Heritability
Birth Weight	.35
Weaning Weight	.26
Yearling Weight	.31
Maternal Milk	.21
Scrotal Circumference	.42

CARCASS EPD ANALYSIS HERITABILITY ESTIMATES

Heritability is the portion of the total variation in phenotype among animals that is due to genes that are passed on to offspring. Heritabilities range from 0 to 1. The estimates used are based upon data reported to NASDA. The heritability estimates used in the National Cattle Evaluation are as follows:

TRAIT	HERITABILITY	TRAIT	HERITABILITY
Weaning Weight	0.33	Fat Thickness	0.36
Ribeye Area	0.35	Ultrasound Ribeye Area	0.41
Marbling	0.29	Ultrasound Intramuscular Fat	0.28
Carcass Weight	0.42	Ultrasound Back Fat	0.56

CARCASS EPD ANALYSIS

There is both ultra-sound scan data and actual slaughter data in the evaluation. Scan records are adjusted to a constant age of 365 days, whereas carcass (slaughter) weight is

adjusted to 450 days - all other slaughter traits are adjusted to a 750 lb constant carcass weight.

B: NASDA MEMBER								O: NASDA NEW MEMBER									

Sire Information – Sires are listed in alphabetical order according to their registered name followed by registration number. Also included are the bull's birthdate, breed percentage, recorded color, recorded horned-polled-scurred condition; sire(S), dam(D), breeder (B), and current owner(s) (O).

#Herds (Number of Herds) – The number of herds in which progeny have been reported.

DC (Number of Daughters' Calves) – The number of daughters' calves reported with weaning weights contributing to the maternal milk EPD. Number of daughters should not be used in lieu of accuracy, but simply to further clarify Maternal Milk and Maternal Weaning Weight accuracy values.

#Dcalves – The number of daughters that have calves.

CED (Calving Ease Direct) – CED predicts the average difference in ease with which a sire's calves will be born when bred to first-calf heifers. Expressed as percentage of unassisted births with a higher value indicating greater calving ease. CED EPD for this sire indicates you'd expect 2 percent more calves to be born unassisted as compared to a sire with a CED of -0.5. (1.5 minus -0.5 = 2%)

BW (Birth Weight) – Progeny from the above sire can be expected to weigh 1.5 lbs. less at birth than progeny sired by a bull with an EPD of +2 (+0.5 minus 2 = 1.5 lbs.)

WW (Weaning Weight) – Calves sired by the above bull should have a 35 lb. advantage in 205-day adjusted weaning weight compared to calves sired by a bull with an EPD of +4. (39 minus 4 = 35)

YW (Yearling Weight) – His progeny should be 45 lbs. above the average of progeny of a bull with an EPD of 30 lbs. (75-30=45)

MWW (Maternal Weaning Weight) – weaning weights averaging 11 lbs. heavier than progeny of a bull's daughters with a MWW EPD of 20 lbs. (41-20=21 lbs.)

MILK (Maternal Milk) – 205-day weights averaging 11 lbs. more as a result of greater milk production than daughters of a bull with a maternal milk EPD of 10. (21-10=11lbs.)

Scrotal Circumference (SC) – Scrotal Circumference EPD evaluates the scrotal size of bulls in centimeters from yearling bull data. Scrotal circumference is a good indicator of puberty, fertility, semen quality and quantity. Increases in scrotal size will also result in decreased age of puberty in daughters and greater lifetime production. Positive values indicate larger scrotal circumference.

CEM (Calving Ease Maternal) – CEM predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to the daughters of another sire in the same evaluation. Expressed as percentage of unassisted births. CEM EPD for this sire indicates you would expect 5 percent more daughters to calve unassisted as compared to daughters of a sire with a CEM of -2%. (+3% minus -2% = 5%)

Marbling EPD (Marb) — expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Carcass Weight EPD (CW) — expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat) — expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (REA) — expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Retail Yield % EPD (RY) — estimates the genetic differences between animals in percentage retail beef yield for a standard carcass weight of 750 lb. Positive EPD values indicate a higher percentage retail yield at the same carcass weight.

Regional Reports

Iowa South Devon Association

by Jordan VanderMolen

The Iowa State Fair held in Des Moines, Iowa, August 12-14 will once again be the highlight of the year for the Iowa South Devon Association. The South Devon show will be held Monday, August 14 and will feature the NASDA Summer National Poundmaker Show, a purebred show, junior show and showmanship competition. Exhibitors also vie for the coveted herdsman's trophy. Cattle must be in place on Saturday, August 12 and will be released following the show.

The 2016 Iowa State Fair was the biggest South Devon show we have ever had as long as I can remember. This was a group effort from all breeders across the country. It has been a positive addition to have a Poundmaker show along with the South Devon show. In the past few years we have had declining numbers at this show so I asked the "South Devon Family" for some much needed support. This was not only just a bigger show, but the competition was as tough as it gets. This year we decided to branch out and ask for donations so we could give back to families that came out to support us. We were able to give large gift certificates to all the winning juniors in all divisions and were able to give a lot of door prizes to every individual. Also, the individuals that placed in the top two in showmanship were given certificates for their hard work and dedication. We gave out a chair to the showmanship winners in Memory of the Richard Sammons Memorial. Congratulations to the showmanship winners, Brandon Van Wyk, senior; Emilee White, intermediate; Blake Van Wyk, junior and Taygen Boyce, pee wee. Once again congratulations to all the exhibitors for the best show to date. Listed below are the donors who graciously supported the junior show. We cannot thank you enough for your generosity.

MJB Ranch, KNN Farms, Joel Popken, DLCC Ranch, Gnech Farms, Fraser Ranch, Wright Ranch, Alumbaugh Farms, Dahl Land & Cattle, Walnut Grove Farms, JVM Cattle Company, Sullivan Show Supply, Stranberg Cattle Company, Hill Crest Cattle Company, Mike & Pam Vander Molen and the Richard Sammons Memorial.

For more information about the Iowa South Devon Association contact, Jordan Vander Molen, 641-521-9917 or e-mail jordanjvm@gmail.com.

Northeast/Mid-Atlantic South Devon Association

by Mike VandenBerg

The Northeast/Mid-Atlantic Association members continue to pursue the goals set by the association to actively promote the South Devon breed in the area and participate in farm shows, regional and state expositions and pasture tours.

The Koebke family from Dudley, Massachusetts continues to sell South Devon beef locally, with a 'South Devon' burger available on the menu at a local restaurant.

For more information about the association contact, Mike VandenBerg, 315-744-4273 or Jim Koebke, 508-949-2043.

Northern States South Devon Association

by Nettie Nelson

The Northern States South Devon Association (NSSDA) has been active this past year promoting the South Devon breed at trade and cattle shows, cattlemen's meetings and field days. The main event of the year is the Minnesota Beef Expo held each October in St. Paul, Minnesota. Each year the NSSDA donates a heifer from one of the member's herds. The heifer is awarded to the winner of the Minnesota Youth Beef Experience Program (MYBEP). This is the 13th South Devon heifer given away during this program, with over half of the recipients still active in the breed. The 2016 heifer was awarded to Cami Paulson, Milaca, MN and provided by Kyle Stranberg. This year's donation heifer was unique, as it was a calf out of the heifer Kyle received through the MYBEP program in 2013. Special thanks to the NSSDA members who supported the program: KNN Farms, Bob & Karen Eicher, Valley Hill Farms, M & K South Devons, DLCC Ranch, Sadler Cattle Company, Dillon & Maddy Sadler, RP Farms and Whispering Spruce Farm. NSSDA members also generously supported the 2016 show. Thank you to the following individuals who sponsored a class: Badeland Cattle Company, Sadler Cattle Company, DLCC Ranch, Dillon & Maddy Sadler, Double D Cattle, Popken South Devon, Stranberg Cattle Company, NASDA and NSSDA. South Devon will be the featured breed at the 2017 Minnesota Beef Expo.

The 2016 NSSDA annual meeting and tour was hosted by the Stranberg Cattle Company at the operation in Maynard, Minnesota on Sept. 10. The day included lunch, a viewing of the cattle, the annual meeting and a tour of the Fagen Fighters WWII Museum. Special thanks to Kurt, Susie and Kyle for hosting the event.

Events planned for 2017 include a meeting at the Sadler Cattle Company, mid-March in Anoka, Minn., support of the NASDA Junior National and Leadership Conference in Manhattan, Kan., the Northern Wisconsin Beef Producers Association 'Kids and Cow's event and the annual meeting and tour to be held at the KNN Farms, Bay City, Wisc., Sept. 16.

The 2017 NSSDA Officers and Directors, from l to r: Ken Bade, Kurt Stranberg, Travis Schlosser, Gail Sadler, Joel Popken, Jim Sadler and Brian Block. Not Pictured, Nettie Nelson.

Southeast Regional South Devon Association

by Steve Elmore

The 2016 National South Devon Tour to be held in North Carolina was postponed, with plans to hold the event in 2018. The 2017 NASDA Youth Beef Experience Program heifer was donated by the Bar E Cattle Co., Clinton, North Carolina and was awarded to Nicole Kibler, Edinburg, Virginia. Bar E Cattle was also selected as the 2017 Seedstock Producer of the Year.

For more information about the Southeast Regional South Devon Association contact Steve Elmore, 910-385-6200 or e-mail: sandbelmore@centurylink.net.

Western States South Devon Association

by Louann Fraser

Welcome to the west! The Western States South Devon Association is beaming with excitement. The second annual Western States South Devon Show

Down held in Billings, Montana this past October, had 11 exhibitors, from five states. A big thank you goes out to all: Jordan Vander Molen, Stranberg Family, Showboat and Lauren Terry, Moniz Family, Miller Family, Emma & Hanna Gnech, Brandon Van Wyk, Haycow, Wright Ranch and Fraser Ranch. All of this wouldn't be possible without our sponsors: Frontier Live Sales, Frank Herefords, Gnech Farms, TM Livestock, Midland Bull Test, Wyatt Derives, Best Of The West, Wright Ranch, Haycow, Fraser Ranch, NILE, Shelby Shaw and Jennifer Boka. A heart felt thank you for all that you do! This year our show dedication went to Leo and Sam McDonnell and family. Leo has enabled the South Devon breed to flourish in the market place through Midland Bull Test. Promoting the breed through efficiency and productivity. We appreciate all that you do.

2017 has come in with full force bringing great opportunities and change for our association. We are very proud of our eight young cattlemen and cattlemen that will be exhibiting their Poundmaker steers at the Colusa County Fair, June 8 – 11, 2017. These young South Devon enthusiasts include: Caitlin Hill, Sandra Franco, Melissa Beebe, Hailey Suhre, Monroe Miller, Alysha Robledo, Eli Miller and Kenny Swearingner. Let's wish them great luck with their projects. They are young trailblazers in our industry.

We will also be on the road in 2017. If you see the Fat Belly Bar-B-Que on the road, follow that Tri-tip and Brian Moniz to the Northern California Reined Cowhorse Competitions starting April 29, 2017. We will be serving Tri-tip and all the fixings.

We would also like to announce the WSSDA Fall Festival, November 11, 2017. This is a steer and heifer Jackpot Show, food, fun and entertainment. Come and enjoy.

Something new this year, Brian Moniz, Louann Fraser, Chad Wright and Travis Moniz will be out and about at cattlemen's meetings and tradeshow promoting the South Devon industry. Come on out and see us!

Our most prized gem this year is our WSSDA Online Show Heifer and Steer Sale. If you want to consign to the sale contact Louann Fraser by August 1. Sale date is October 16, 2017. We are looking for South Devons with all the Bells and Whistles!

Bull Sale, for the largest
selection of South Devon and
Poundmaker seedstock

We are South Devon Enthusiasts!

- South Devon is the dominant British breed alternative to Angus.
- Our \$Profit analysis shows that South Devon are the high ranking breed.
- South Devon cattle excel on feed conversion.
- We are aggressively adding South Devon to our Stabilizer composite program.

BC Progress 315U

Owners: Leachman Cattle of Colorado, MJB Ranch & Nichols Farms.

Progress is the highest \$Profit option for adding South Devon to your composite gene pool! Our continued commitment to those of you that use our Stabilizer program is to find and test bulls from the most compatible and valuable breeds. Along with that we require that every component breed is represented by sires that can compete with and add to the value of existing cattle in our gene pool. Progress not only meets our criteria, but posts one of the highest \$Profit value in this offering, and ranks in the top 1% for Feed/Gain and 2% for Intake. This purebred South Devon sire excels in nearly any breeding scenario from pure bred seedstock application to developing a unique composite gene pool. If you're a trailblazer, this bull needs to be on your short list.

Dodge City is the big spread, high \$Profit bull in the breed! He has emerged in the NASDA database as one of the easiest calving ease sires in the breed. Based on this proof, Leachman Cattle of Colorado purchased Dodge City and five of his yearling sons from DLCC Ranch. We are currently using these bulls in our test herds so look for Dodge City sired sons in future bull sales and semen catalogs. Here is a way to create maximum hybrid vigor on British breed heifers.

Owners: Leachman Cattle of Colorado & DLCC Ranch.

DLCC Shur Loc 99W

Owners: Leachman Cattle of Colorado & DLCC Ranch.

Shur Loc may be the most attractive bull in the entire South Devon breed! It comes as no surprise that he is a 2-time Denver Champion. His combination of near Angus phenotype and performance background make him an interesting option for South Devon seedstock breeders, and for nearly any crossbreeding program as he adds heterosis to both British and Continental based herds. On top of hybrid vigor, he will add high growth (Top 3% YW), big ribeye (Top 3% REA), and super feed efficiency (Top 1% Intake and F:G). Best of all, he will add profit (Top 1% \$Profit) to any herd! Shur Loc is well-balanced, easy fleshing, heavy muscled and smooth made. This South Devon trait leader for birth weight passes his good looks on to his calves as well.
